— CORE COMPETENCIES

Event Production (AVLS)

Audio, video, lighting, and staging for ceremonies, community events, festivals, races, and command functions — delivered turnkey by one crew.

- TV1 mobile LED trailer — 20' wall, 30-minute deploy, self-powered
- Live feeds, livestream, live captioning, HD multi-camera switching
- PA systems, wireless mics, digital mixing; stage decks and risers

Temporary Site Power & Microgrids

Battery energy storage and hybrid microgrids deployed standalone — quiet, low-emission power for events, film, exercises, and resilience-critical sites.

- Battery-only builds: silent, zero on-site emissions, no fuel handling
- Hybrid microgrids: generator runs brief and loaded in its efficiency band
- Advisory: needs assessment, load analysis, system design, CONOPS
- Measured sustainability reporting — fuel, engine-hours, CO₂ (EPA factors)

— PAST PERFORMANCE — SELECTED

- **U.S. Navy MWR Freedom Festival** — PMRF Barking Sands, Kaua'i (video production)
- **Major studio feature film** — 21-day hybrid microgrid, Kalaeloa Stages (2026)
- **Rip Curl The Eddie** big-wave invitational, Waimea Bay (2026)
- **WSL Lexus Pipe Pro**, Pipeline (2026)
- **Honolulu Marathon & The Hapalua** finish-line production
- **Great Aloha Run** (power, audio, video)
- **Polynesian Voyaging Society** — battery-powered event
- **Eddie Aikau Foundation** — battery-powered event
- **Le Jardin Academy** graduation (video)
- **CNHA · Cirque du Soleil 'Auana · Disney Aulani** events

— TV1 — HAWAI‘I’S ONLY QUICK-DEPLOYING, SELF-POWERED LED & AUDIO SUITE

One trailer, one crew: a 20’ 4mm-pitch IP67 LED wall with integrated audio, HD video mixing (4× SDI/HDMI), wireless microphones, and onboard power — deployed and struck in 30 minutes.

“Island Vision delivered on all promises with TV1. The top quality equipment, innovative packaging, unbelievably simple setup and breakdown, and excellent service are just a few reasons why they will be back at future events with the Honolulu Marathon Association.”

— JJ JOHNSON, RACE DIRECTOR, HONOLULU MARATHON

— KALAELOA STAGES MICROGRID — 21-DAY CUMULATIVE RESULTS (2026)

On a major studio feature production, IVP’s hybrid microgrid (2× BESS + single right-sized generator) replaced two conventional set generators — delivering 24-hour continuous power for 21 days with zero interruptions. All figures from system telemetry and hour-meter-verified runtime, matched to actual production hours.

85% FUEL REDUCTION — 694.2 GAL SAVED	91% ENGINE-HOURS ELIMINATED	92% QUIET HOURS — 462 HR 55 MIN OF 504
10/21 DAYS FULLY GENERATOR- FREE	7.8t CO ₂ AVOIDED (EPA AP-42 FACTORS)	100% PRODUCTION UPTIME — ZERO OUTAGES

From April 10 onward, pre-call charge scheduling moved all generator runtime to 3 AM — **100% quiet production hours** through the end of the engagement. Detailed daily performance reporting available on request.
